

API Specification Sheet (Endpoints & Payloads)

All authenticated endpoints require a valid JWT passed in the Authorization: Bearer <token> header.
Tenant context is derived securely from this token, not from client payloads.

Endpoint Route	HTTP Method	Required Roles	Request Body / Params	Success Response (2xx)	Error Messages (4xx / 5xx)
/api/v1/auth/register	POST	None	{ "email": "user@acme.com", "password": "123", "company_name": "Acme" }	201 Created: { "access_token": "jwt...", "token_type": "bearer" }	400 Bad Request: "Email already registered."
